

```
std::integral_constant  
< bool,!std::is_fundamental  
  < T >::value >
```

```
gxx::integral_constant  
< bool,!gxx::is_fundamental  
  < T >::value >
```

```
is_compound< T >
```

The diagram shows a central box labeled 'is_compound< T >' with two blue arrows pointing to the left. One arrow points to the 'std::integral_constant' box, and the other points to the 'gxx::integral_constant' box, indicating that both traits inherit from 'is_compound'.
